TUYA AI SMART PEEPHOLE DOOR VIEWER X1

X1

150°Field of view | TUYA Touch OS | 2.5D Surface | Infrared night vision | Magnetic fixation

5inch LCD

5inch 854*480 LCD ， it is clear to view outside of door

Easy touch control the OS

TUYA cloud inside

Human body sensing, 24-hour real-time monitoring

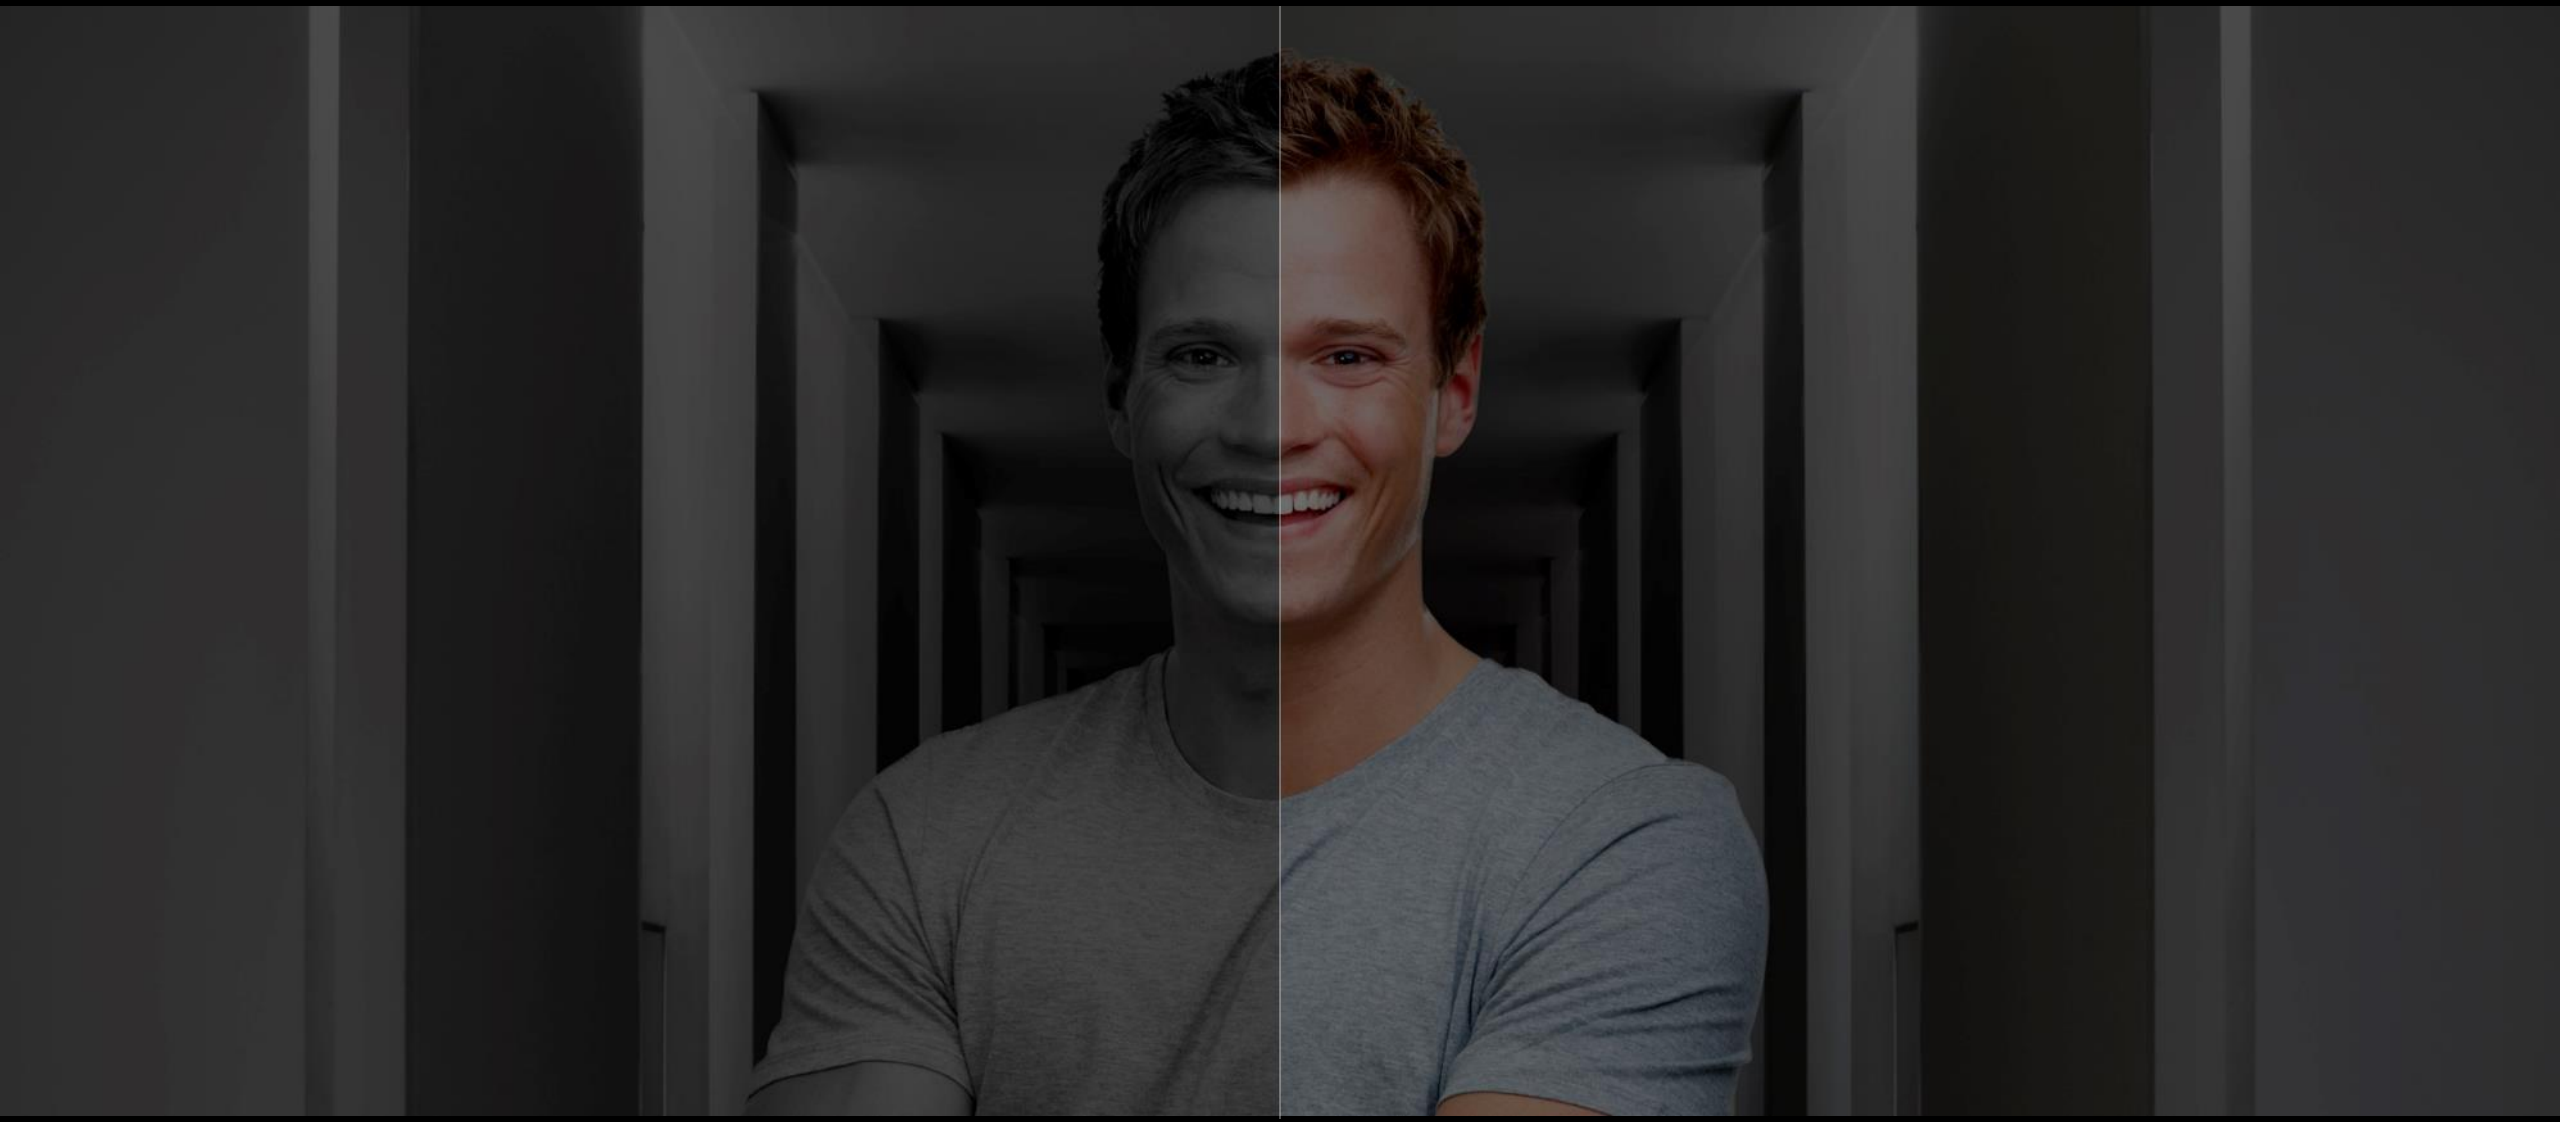
The German PIR infrared sensor is combined with the image AI technology to optimize the algorithm and the network. Some people immediately capture or record the video and push the reminder information to the mobile APP through the cloud encryption server.

150° wide-angle lens, wider field of view

With a monitoring level wide-angle lens, the high aperture of the large aperture, even in the complex lighting environment, even the backlight, the image can be clearly presented, far better than the traditional cat eye effect.

Low-light full-color technology to extend color recording time

Even in a low-light environment, a color image can be seen by relying on the fill light of the doorbell light. In the same environment, other electronic cat eyes need to switch to the black and white effect of the infrared light fill mode.

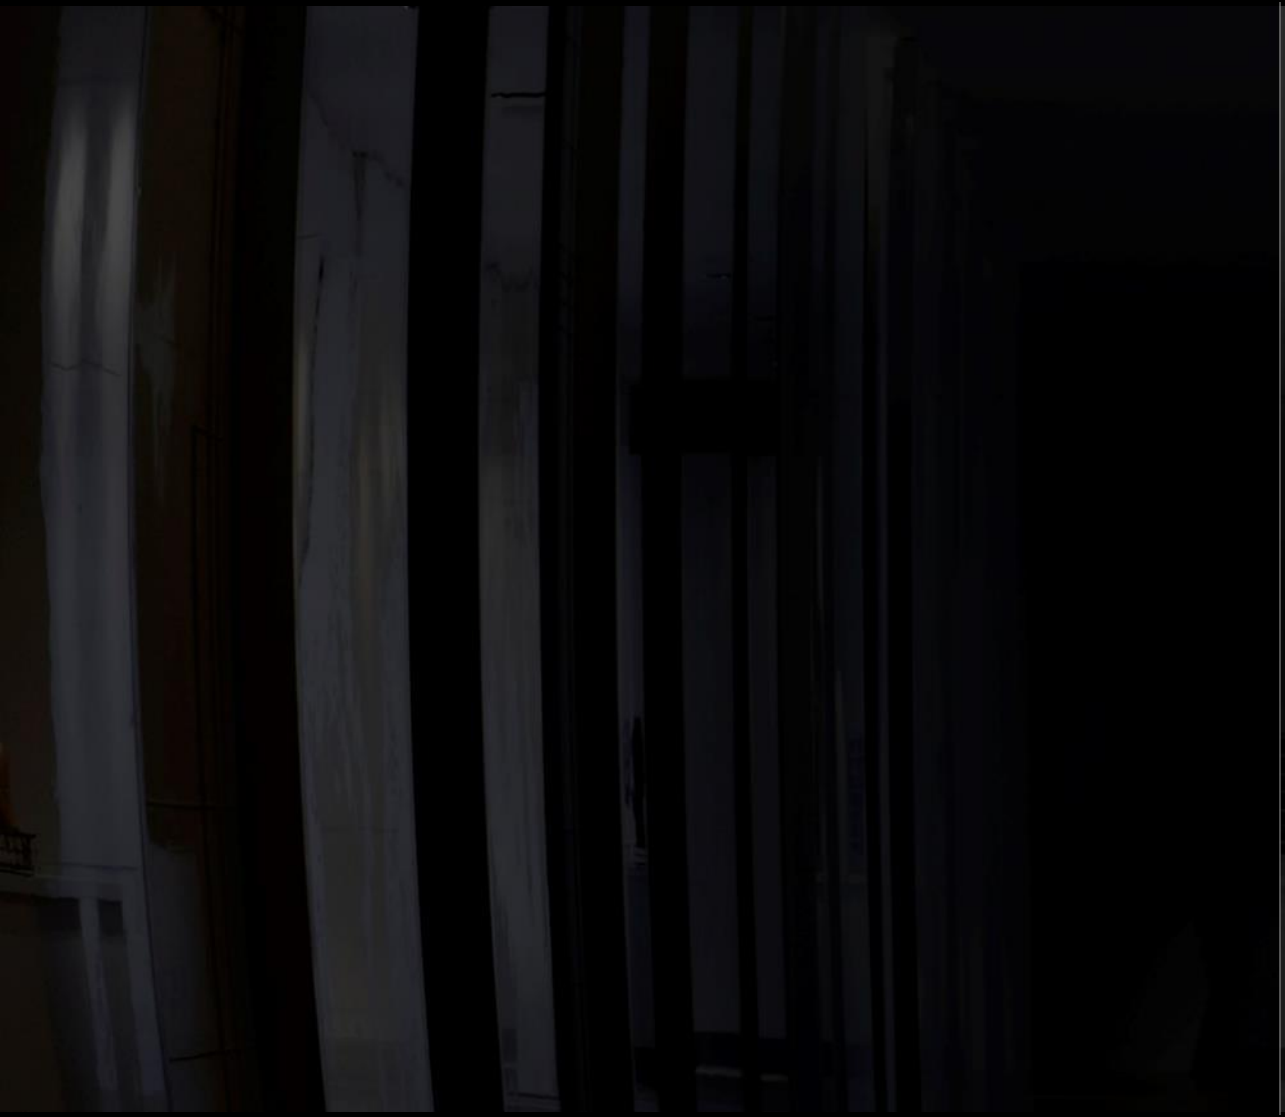


Switch to black and white screen under normal low light conditions

Color image remains in low light conditions

Noise reduction infrared night vision, let the truth hide in the dark

Equipped with 4 high-end infrared night-vision lights, professional infrared lampshade, better permeability, clearer night vision effect in dark light and low light.



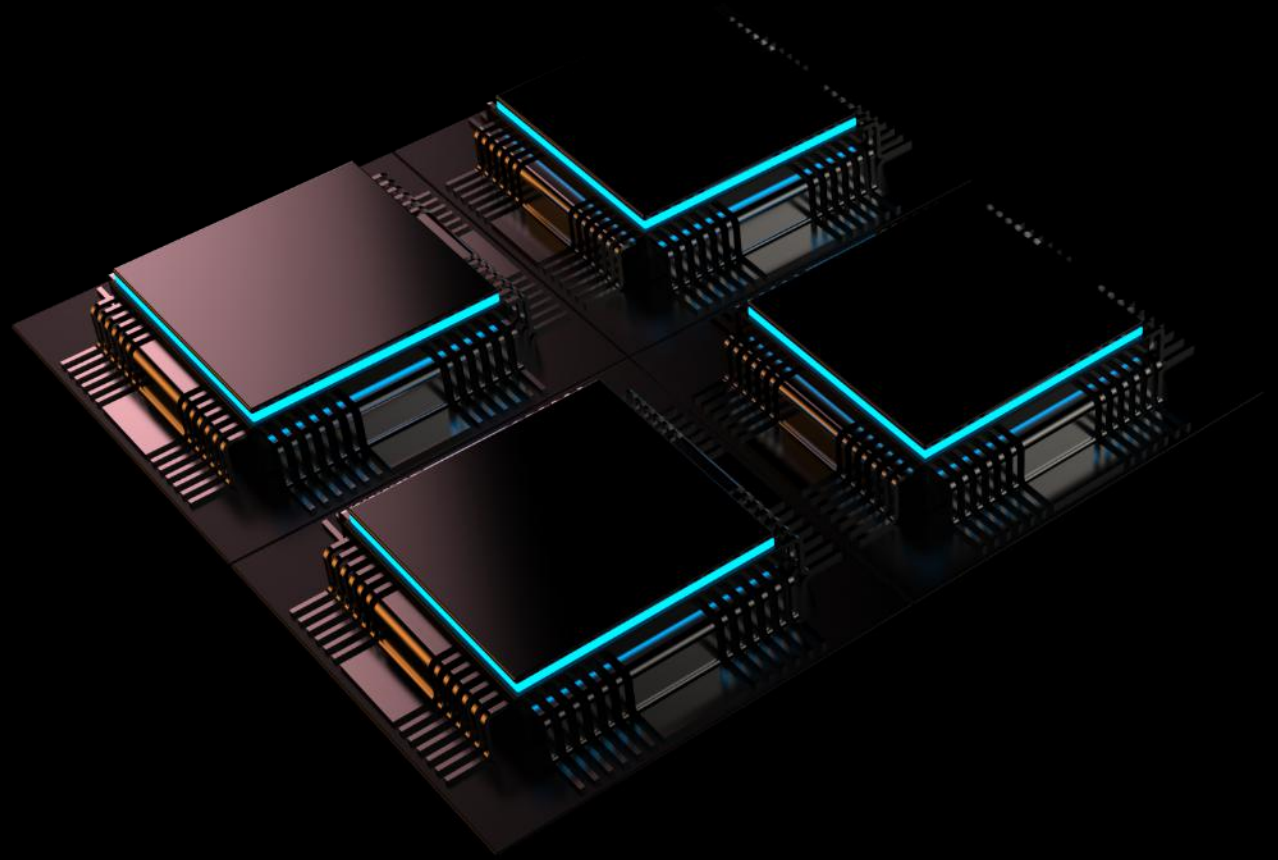
Normal visual inspection

Infrared fill light night vision effect

IR CUT tech with camera

Without IR-CUT in day sunlight

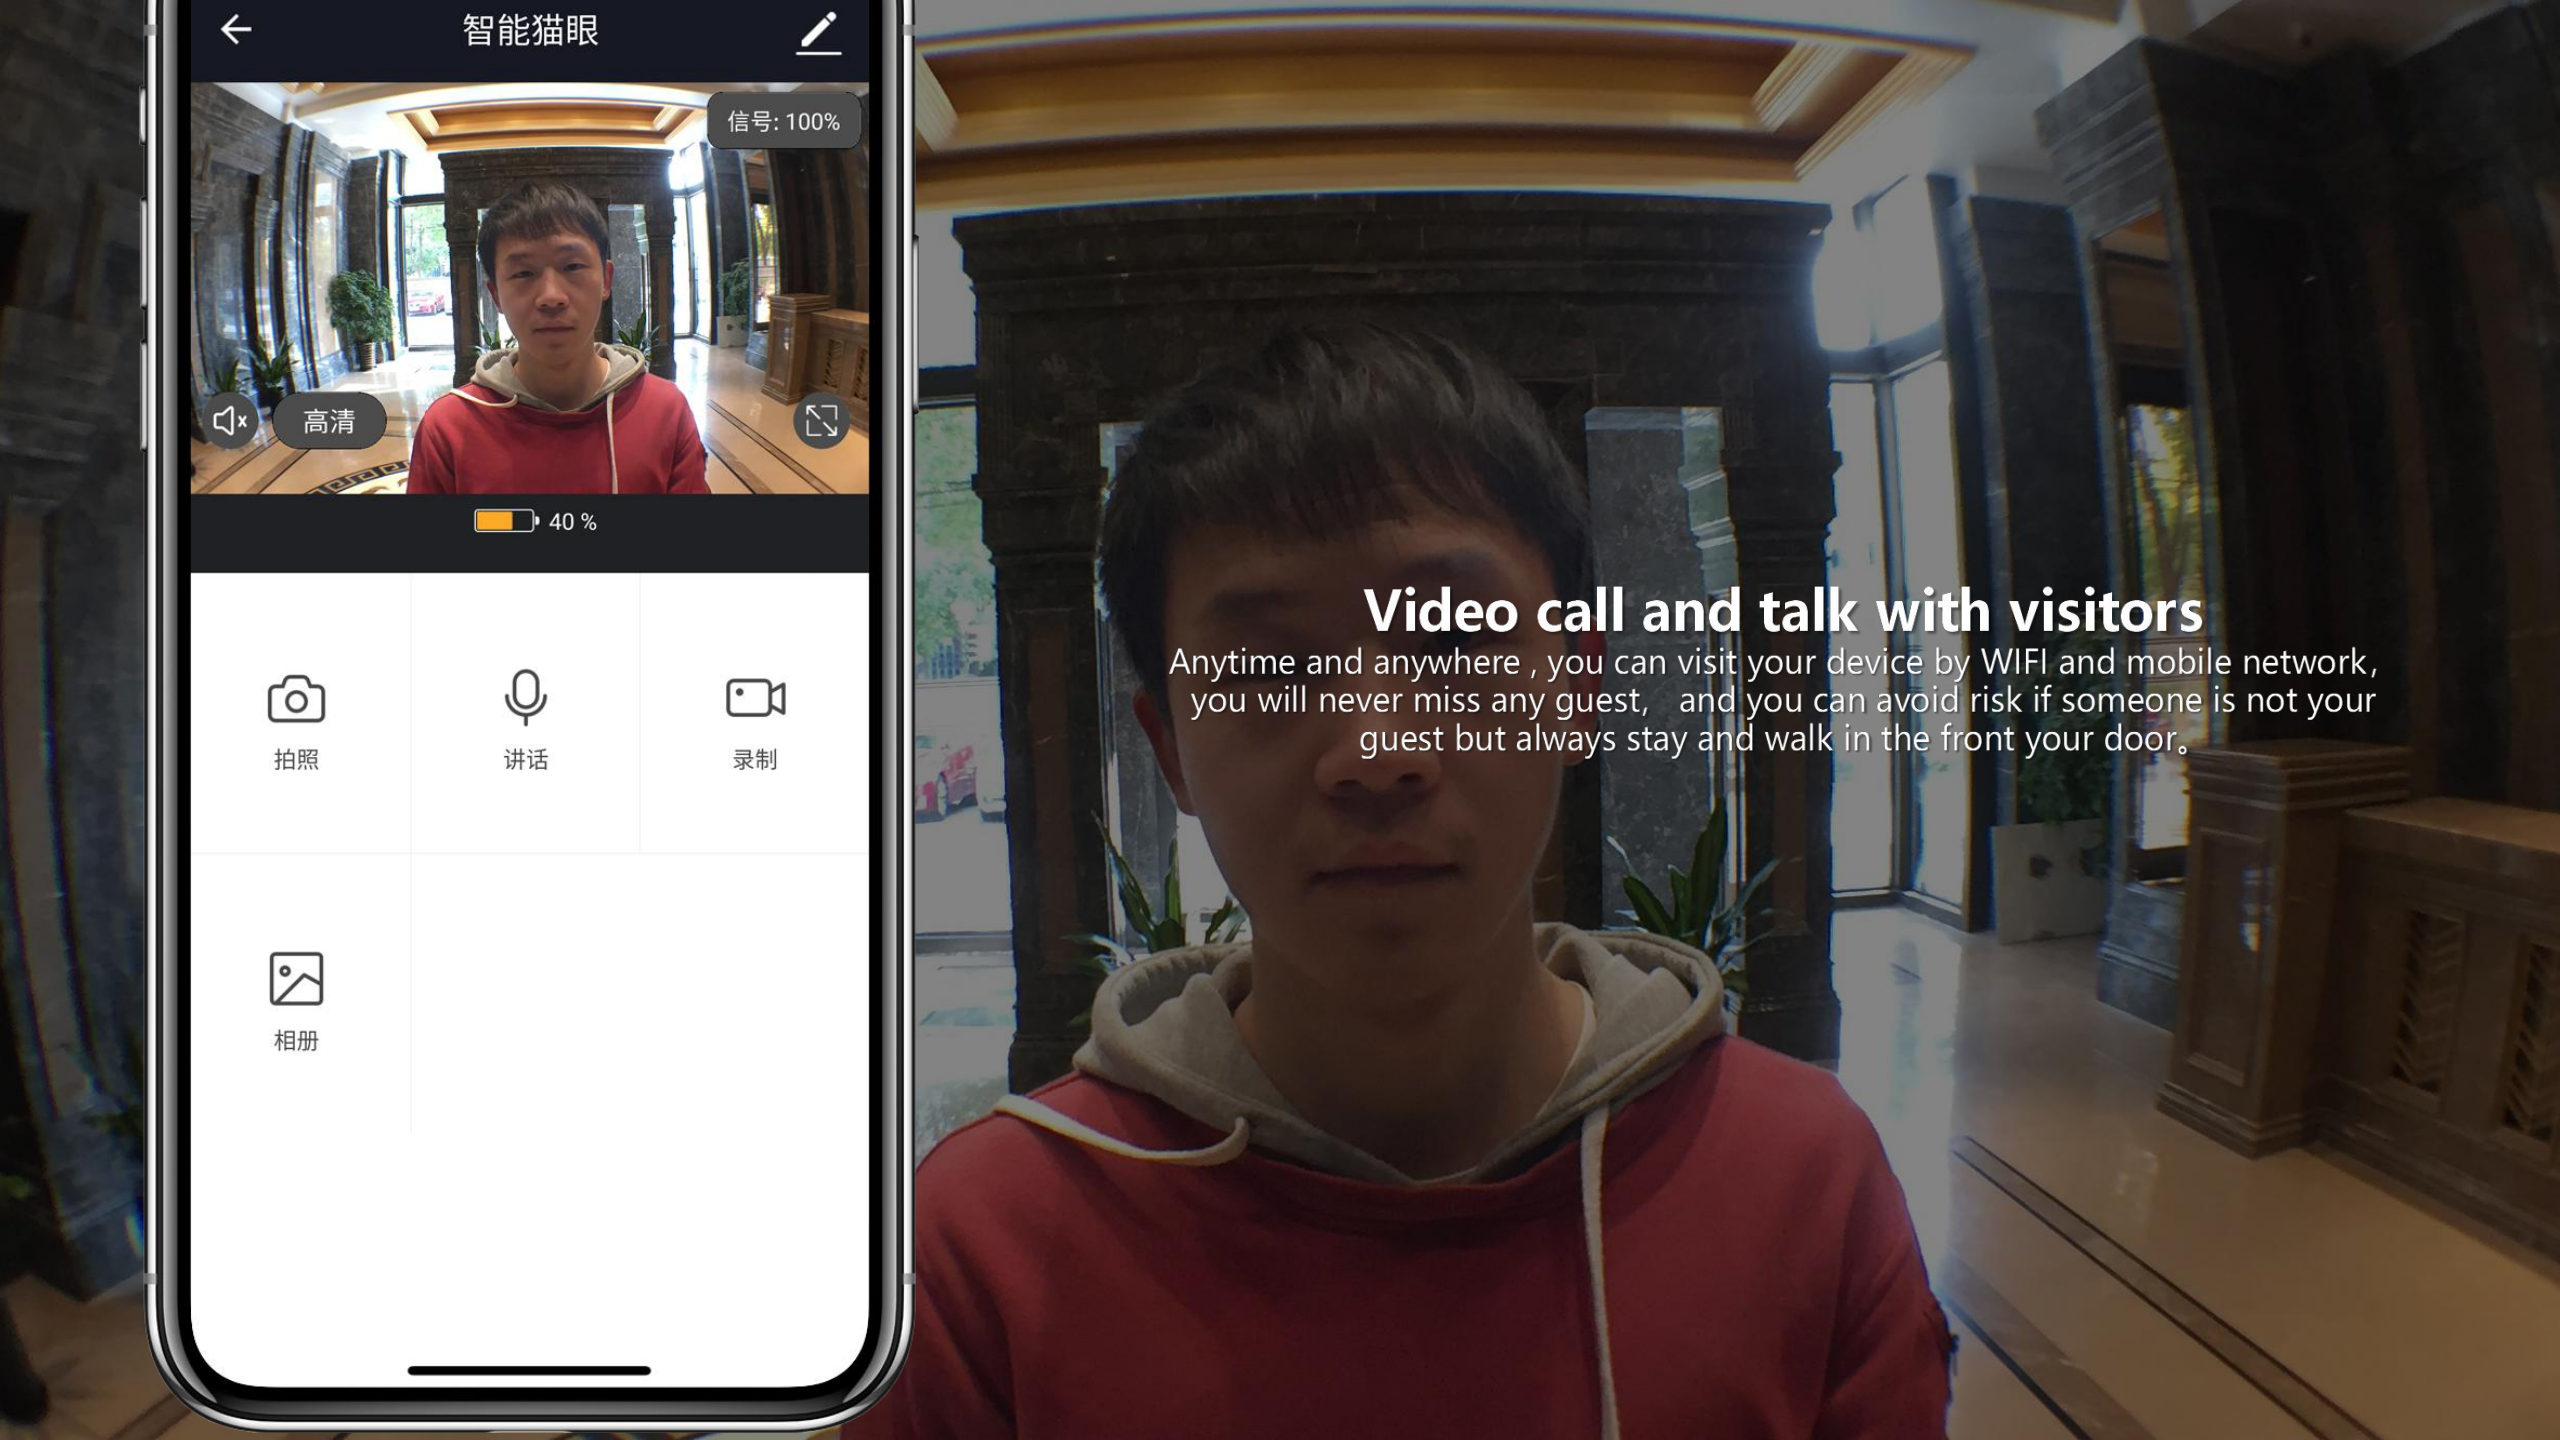
With IR-CUT IN day sunlight



Silent guardian because of power

ARM quad-core processor, stronger performance and lower power consumption, easy to handle multi-application operation, door control system alarm is faster and more stable.

XENO
Tuya-global APP for smart



Video call and talk with visitors

Anytime and anywhere , you can visit your device by WIFI and mobile network, you will never miss any guest, and you can avoid risk if someone is not your guest but always stay and walk in the front your door。

TUYA OS and FOTA update SW

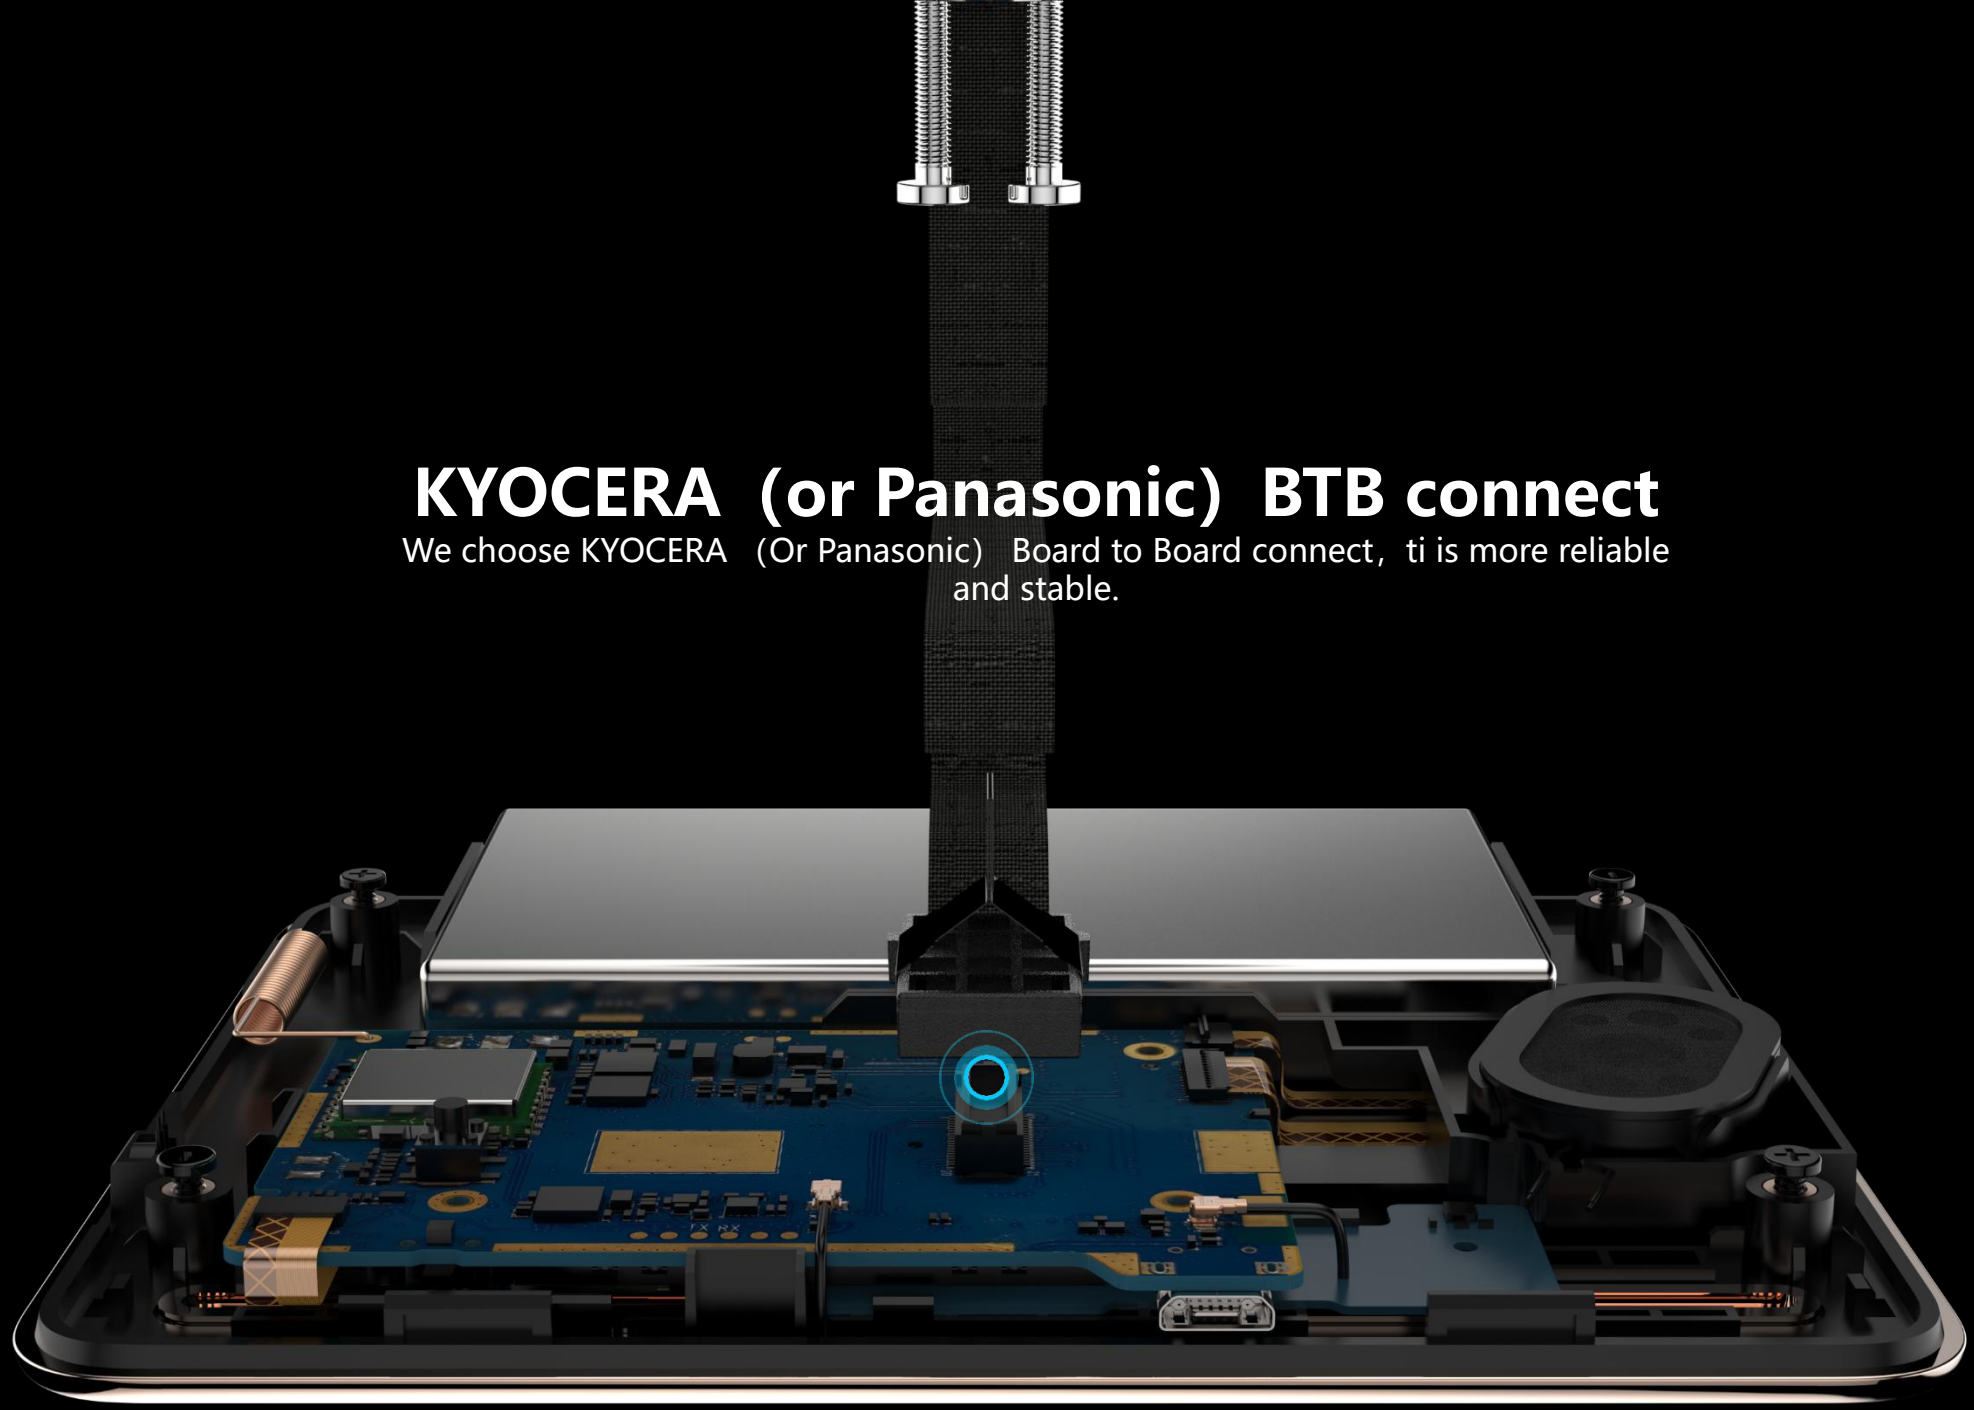
The exclusive hardware system based on TUYA deep customization is safe, stable, advanced, easy to use and efficient.

Metal protect and not allowed alarm

All key connect outside is with metal material，if the inside connect is abnormal， the device may alarm and APP send alarm to owner。

KYOCERA (or Panasonic) BTB connect

We choose KYOCERA (Or Panasonic) Board to Board connect, ti is more reliable and stable.



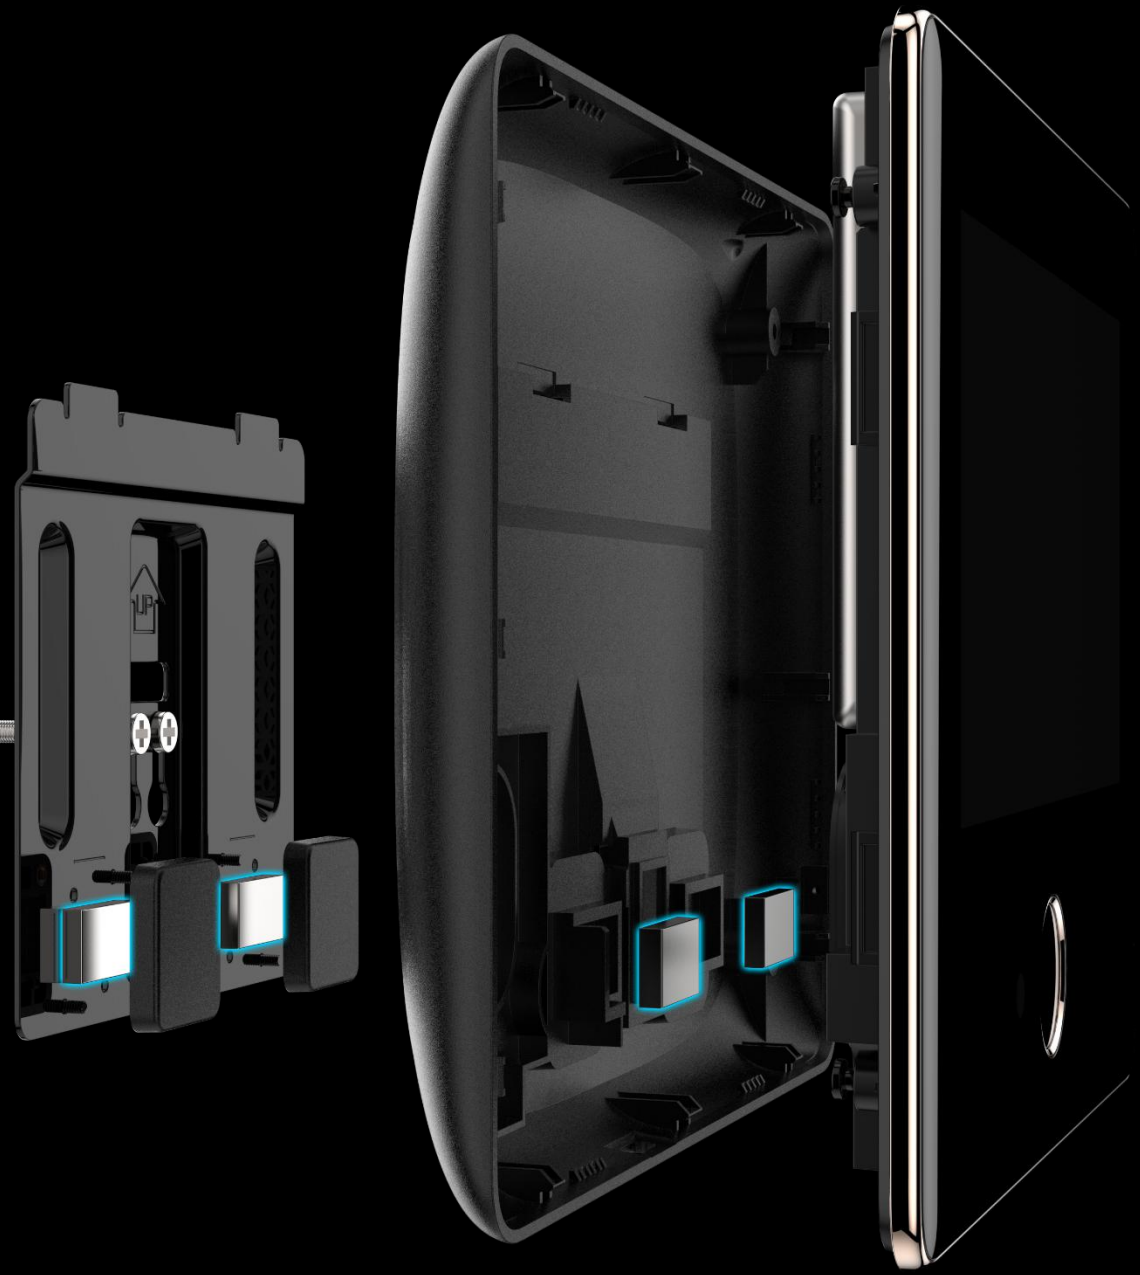
Large capacity battery, long battery life

Built-in 8600mAh high-density polymer lithium battery, combined with professional intelligent power-saving technology, can standby more longer.

(This standby time data is tested by Cloud Control Huilian Lab, so that the product is not connected to the network and the test standby time based on PIR is not turned on. Actual standby time may vary due to different test conditions, actual use time and ambient temperature, use Frequency, router, etc.)

Four strong magnets are designed for adsorption and installation is more convenient

The structural engineer took 2 months. After countless trials, I finally got rid of the trouble of fixing the mainframe with screws. Built-in four strong magnets, one plug, one hook, one suction, simply complete the installation of the host.



Easy to install, users can install it themselves

Cloud Control Huilian intelligent door control can adapt to most security doors on the market. The adapted cat's eye aperture range is 15mm-50mm, and the fitting door thickness is 35mm-110mm.
